SKILL 1&2

2026

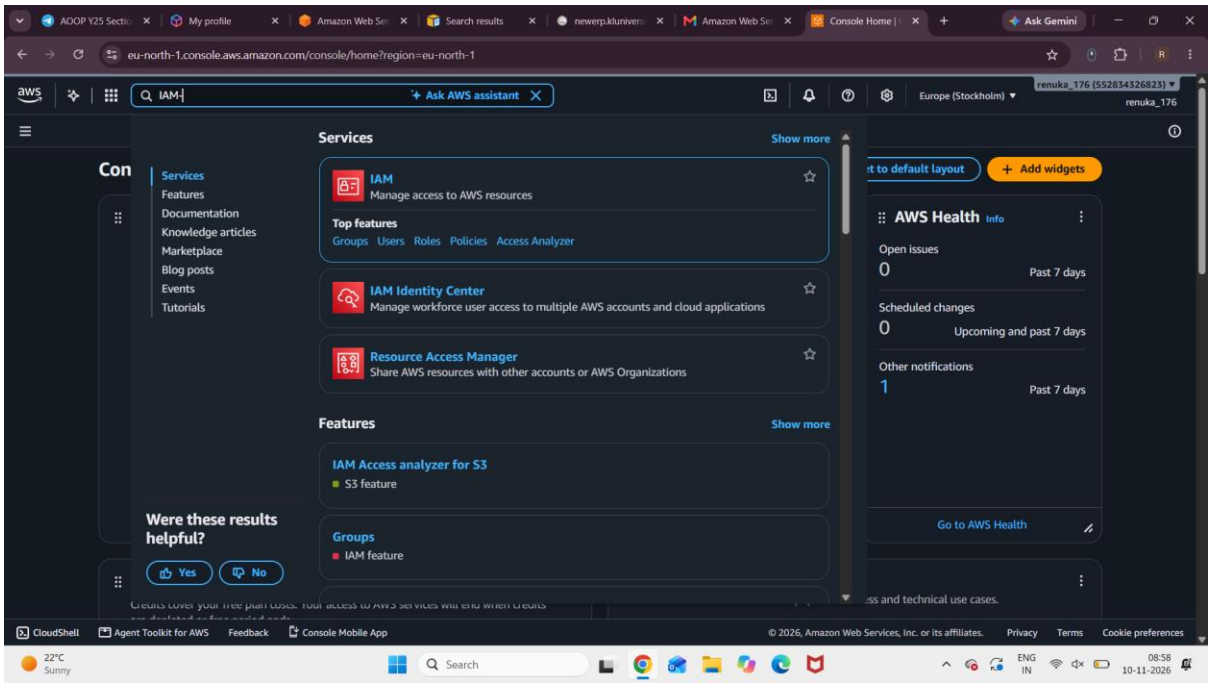

CREATE IAM USER:

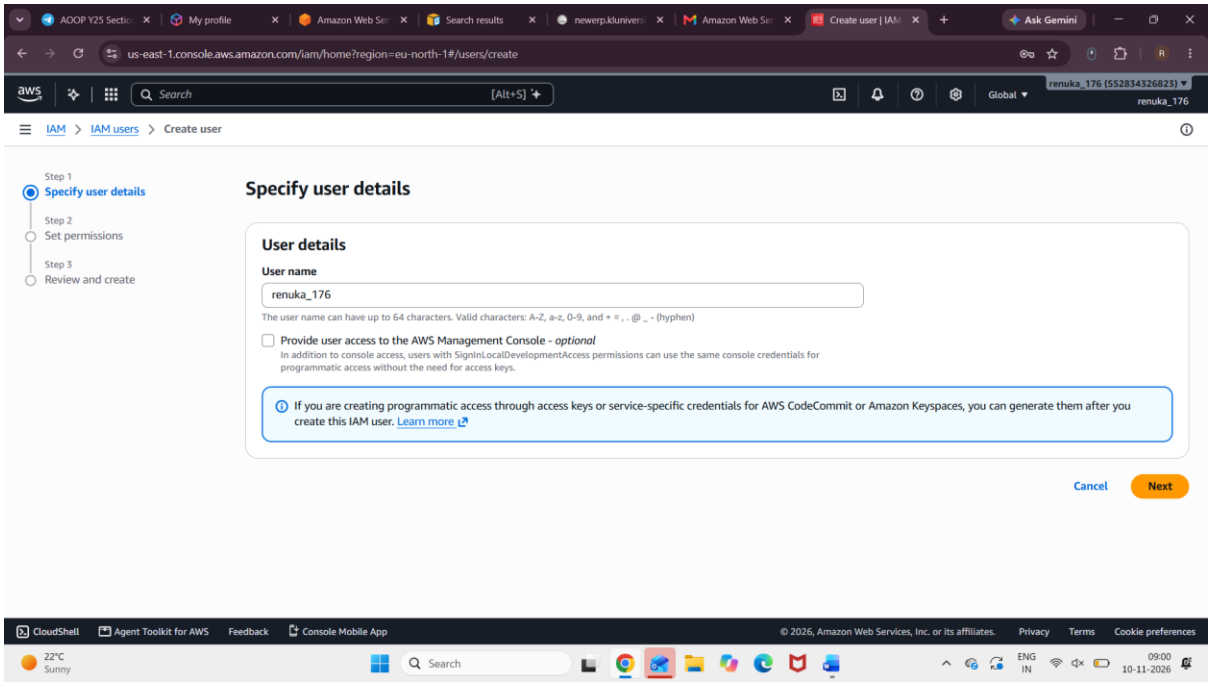

1. Create an IAM user with programmatic access only, download the access key and secret key, and document the steps with screenshots.Then set up a billing alert for the account so that an email is received when the Free Tier limit is about to be crossed.

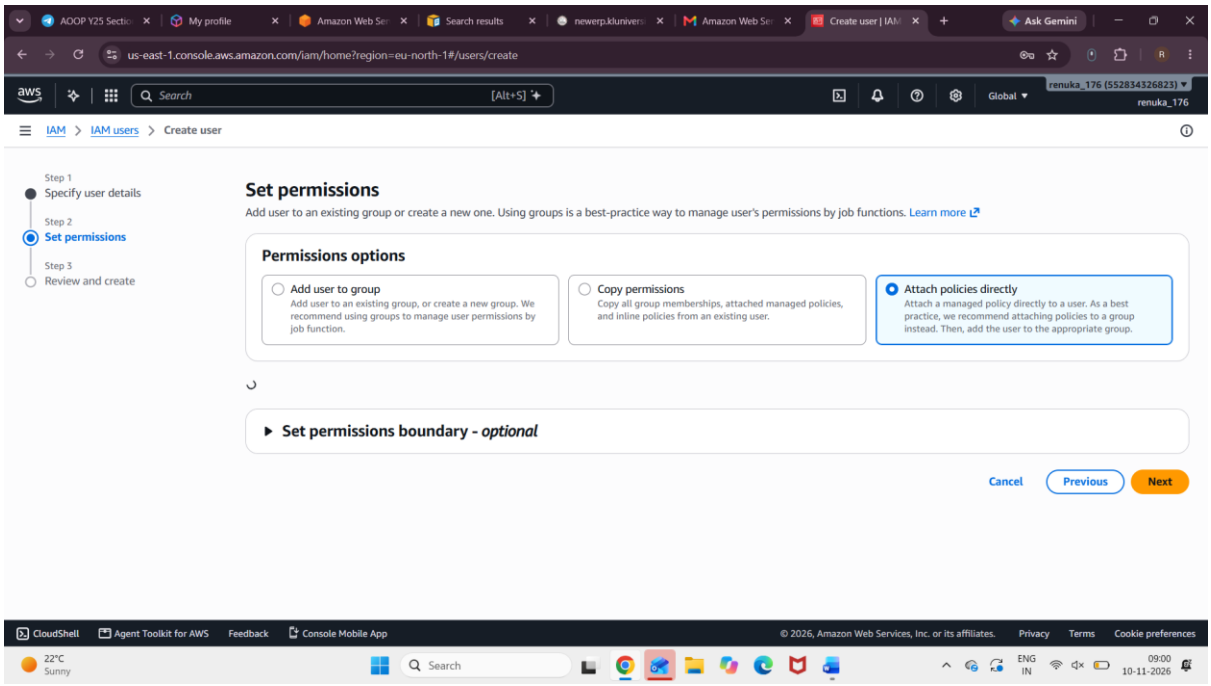

Description:

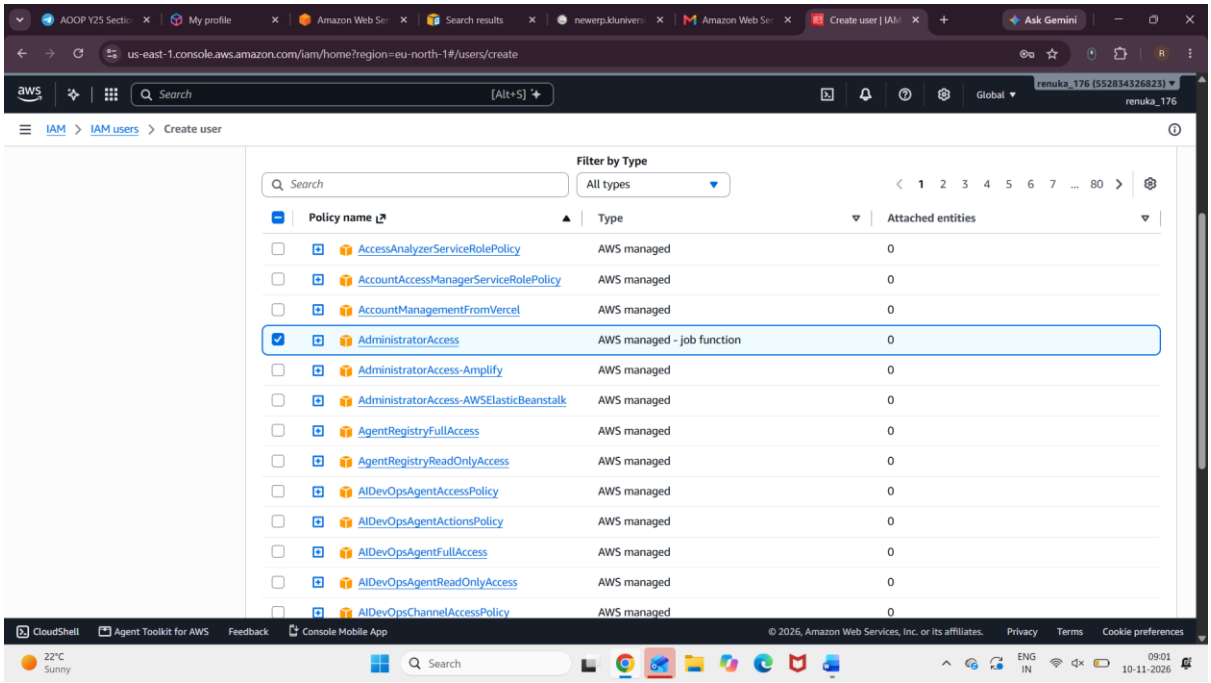

IAM (Identity and Access Management) is an AWS service used to manage users and permissions securely. Created a new IAM user and assigned the required permissions. Set an AWS Budget to monitor cloud expenses and control spending. Configured alerts to track budget limits.

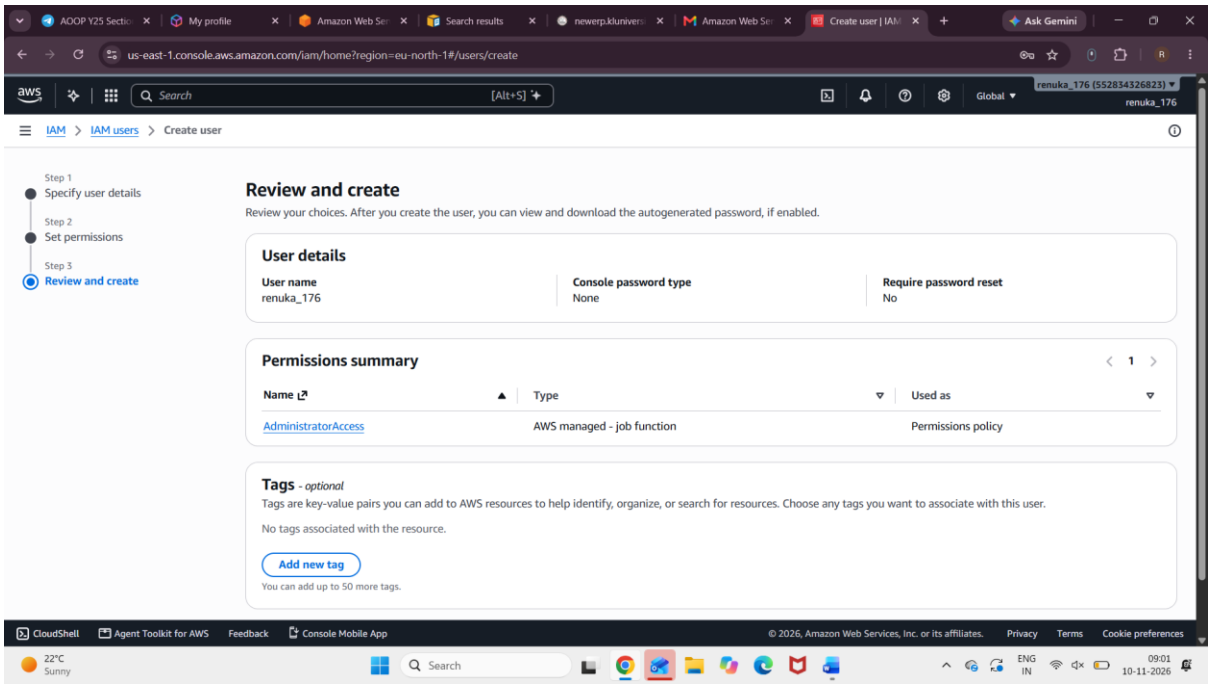

STEPS:

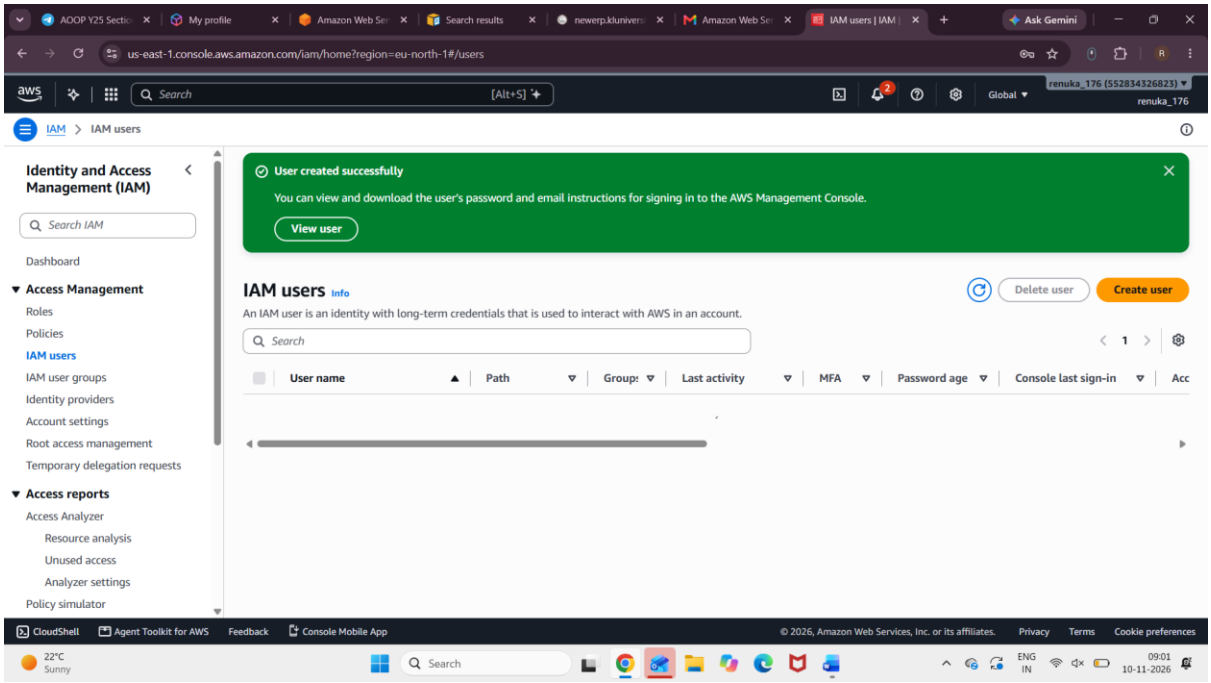

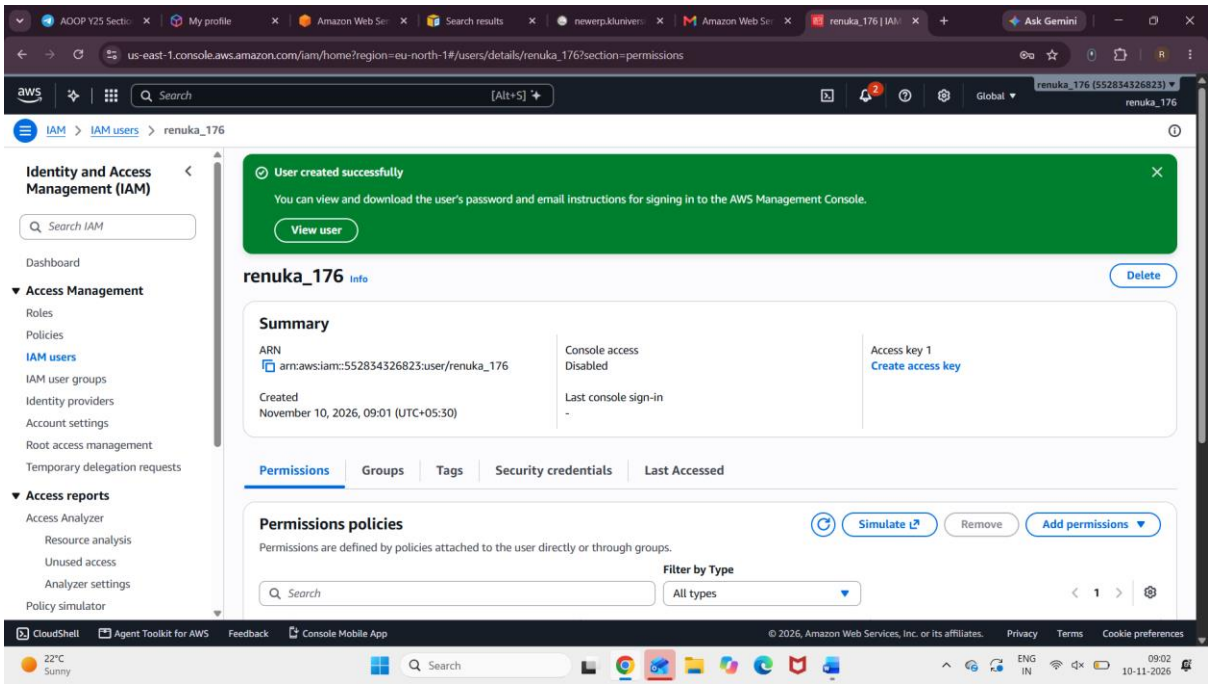

us-east-1.console.aws.amazon.com/iam/home?region=eu-north-1#/users/create

Specify user details
User details
User name
renuka_176
The user name can have up to 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)
Provide user access to the AWS Management Console - optional
In addition to console access, users with SignInLocalDevelopmentAccess permissions can use the same console credentials for programmatic access without the need for access keys.
If you are creating programmatic access through access keys or service-specific credentials for AWS CodeCommit or Amazon Keyspaces, you can generate them after you create this IAM user. Learn more

Set permissions
Step 3
Review and create
Set permissions
Add user to an existing group or create a new one. Using groups is a best-practice way to manage user's permissions by job functions. Learn more
Permissions options
Add user to group
Add user to an existing group, or create a new group. We recommend using groups to manage user permissions by job function.
Copy permissions
Copy all group memberships, attached managed policies, and inline policies from an existing user.
Attach policies directly
Attach a managed policy directly to a user. As a best practice, we recommend attaching policies to a group instead. Then, add the user to the appropriate group.
Set permissions boundary - optional

Access key best practices
Never store your access key in plain text, in a code repository, or in code.
Disable or delete access key when no longer needed.
Enable least-privilege permissions.
Rotate access keys regularly.
For more details about managing access keys, see the best practices for managing AWS access keys.
